

Backlink Power Indexer Tutorial

Brought to you by <http://bestblackhatforum.com>

Email: bestblackhatforum.com@gmail.com

Registration Code: DF1E-1E6D-F6A9-1782-78CF

Important : Leave the Title and Keyword Fields Blank When Using The Software

Download and run the software ,

After this is complete right click the Backlink Power Indexer icon and select run as administrator.

When opening for the first time the software will request that you input your unique registration key and matching e mail address

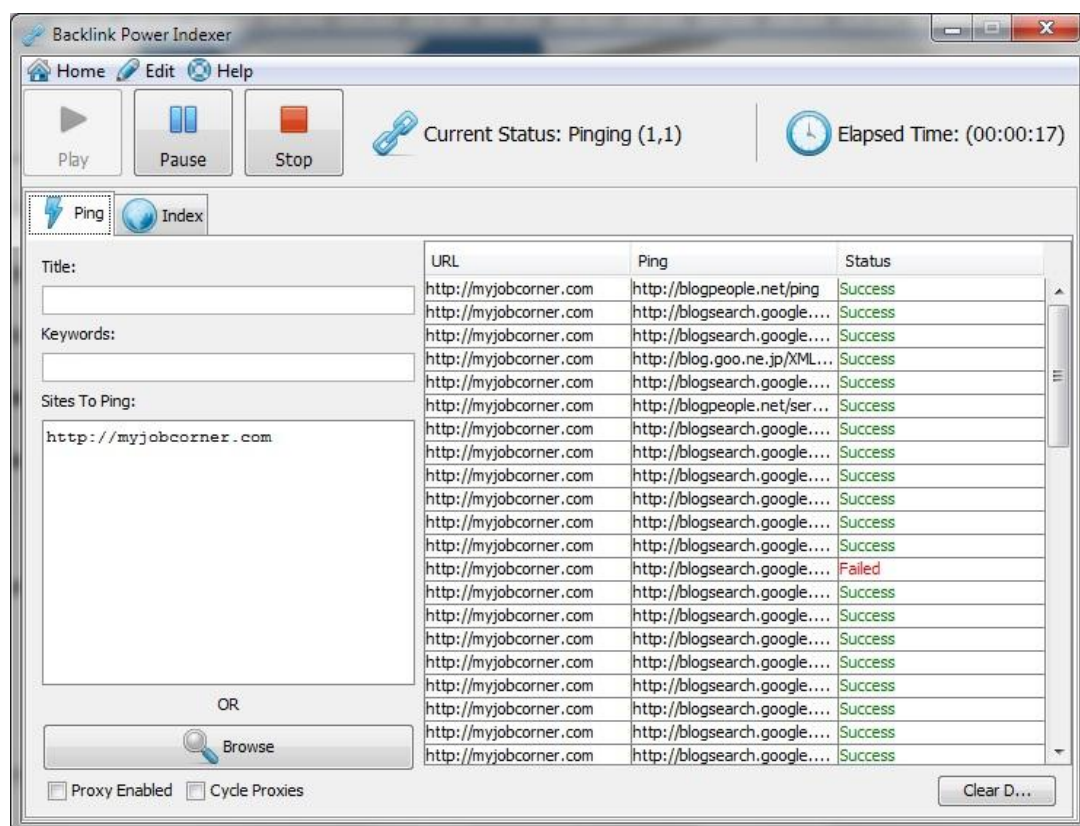

This will only be asked the first time you use the software.

This will open the software

Pinging

Welcome and Congratulations on Your Purchase of This Great Pinging Tool and Website Indexer

This is a very easy to use one click application where you can do the following.

Ping Your Backlinks by simply importing your links into the software via a text file and than selecting start.

If you have your backlinks in an Excel spreadsheet, simply copy and paste those links into a text file and than import into the software by clicking on 'Browse'

Or Copy and

Leave the Title and Keyword fields Blank

Entering Keywords can lead to a low success rate as a Number Of Ping sites Reject Them

You can also ping your websites , by simply typing in your url in the 'sites to ping' field

One url per line

Type in your url/s and simply press start

You may pause the software at any time . To unpause simply press start.

The software will resume from where it was paused.

If you press stop and than start again , the software will start from the beginning.

The software has dozens of ping sites preloaded and will run through them automatically.

It will show which pings have been successful and if any failed [Ping could fail due to a ping site being offline or a significant change to which a ping is submitted]

Ping Sites can be added or removed by simply selecting Edit > Ping Sites

A list of Ping Sites will display

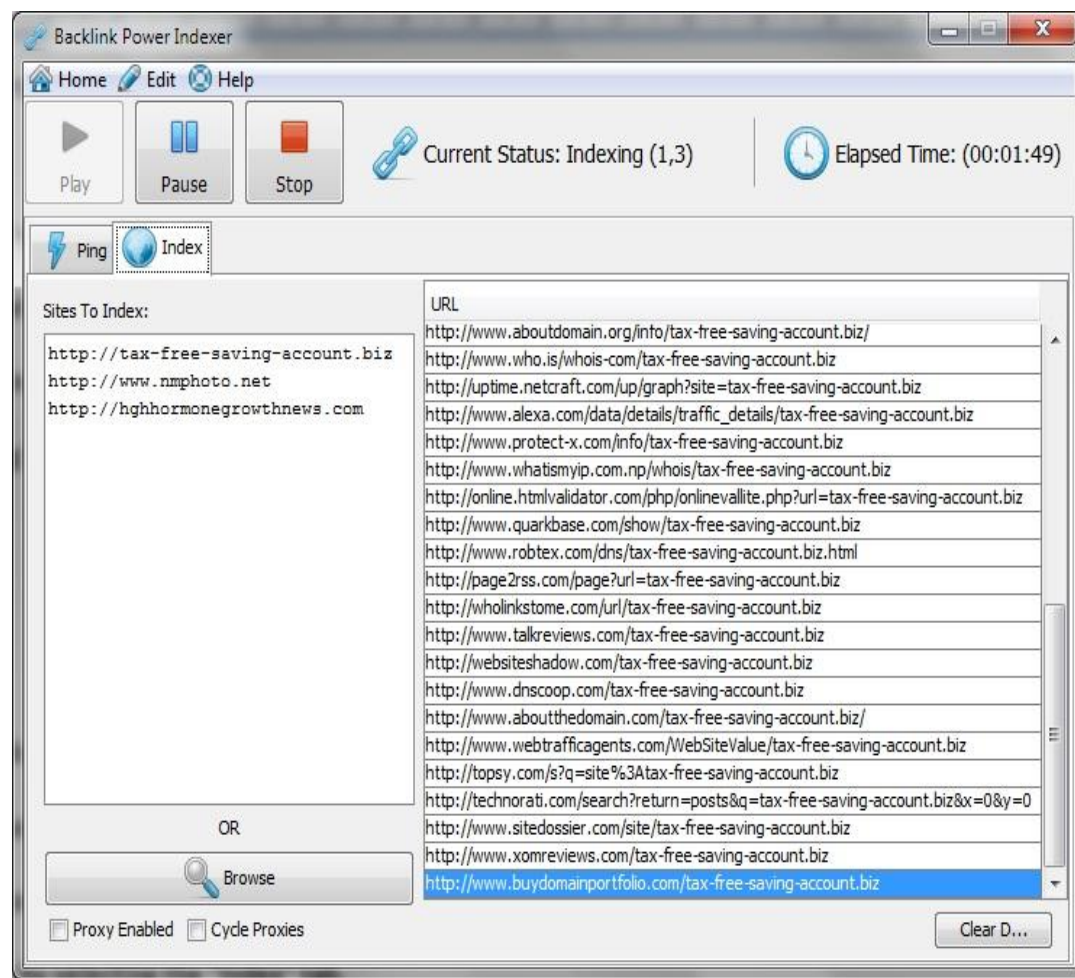

To Add a new Ping Site simply type in the url of the Ping Site in the url field and select 'Add'

To remove a Ping Site simply Highlight the Site and Select Remove

You can disable any Ping Site without actually removing it by deselecting the tick in the Tick Box

This allows you to enable at anytime by simply ticking the selected URL.

[Indexer](#)

Submits Your Website to thousands of Who Is and Valuation Sites

Creates a Page of your site on certain Who is Sites thus giving you creating a backlink to your site

After Pinging is complete the software will automatically default to Index Option.

You can also go directly to Index without pinging first by selecting the “Index” tab.

You can index the website urls that you just pinged by selecting the Start Button

You can load a different set of urls to index by simply clearing the display . Select the “Clear D” Button in the Right Hand bottom corner.

Than simply type in your website url/s or import a list by selecting the ‘browse” button.

When importing must be in text file format.

Press Start and the software will start submitting your url to the list of preloaded Who is and Valuation sites

If you select pause, it will hold the run until you press start.

Pressing start after pausing will mean the software will start from where it left off.

Pressing stop and then start will mean the software will start from the beginning once again.

As there are tens of thousands of sites preloaded into the software , you can custom select exactly how many sites you want to submit to.

Simply select Edit >> Index Amount, and choose from there, or select custom amount and type in the amount.

The default is on “All”.

PS: Most Who is and Valuation sites will only accept your home page and not inner pages of your website.

There are however a number of sites in the second half of the list which will allow a inner page or backlink to be indexed.

As sites change their submission rules from time to time, you can remove any sites that you feel are not functioning by highlighting the url and selecting remove.

Better though to disable by unselecting the tickbox.

Go to Edit >> Index Sites and the Edit Index sites screen will display.

Other Features

The Software is also Proxy Enabled. Optional

Should you wish to use proxies, select Edit >>Proxy Settings . Enter Your Proxy , test and Add.

You can add a number of proxies and than select the Cycle proxies option which will allow the software to cycle through the different proxies during a run.

After adding your proxies, before selecting start, tick the Proxy Enabled box . If you added multiple proxies tick the Cycle Proxies box as well.

These tick boxes are situated in the bottom left hand corner of your screen
