

Upgrade Guide (RSSBot example)

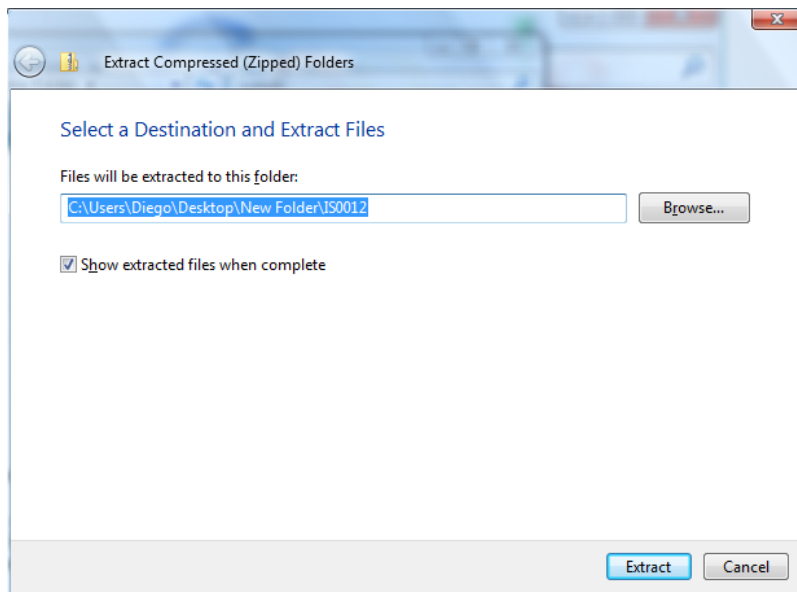

Open your web browser and navigate to: <http://www.incansoft.com/Upgrades/IS0012.zip>

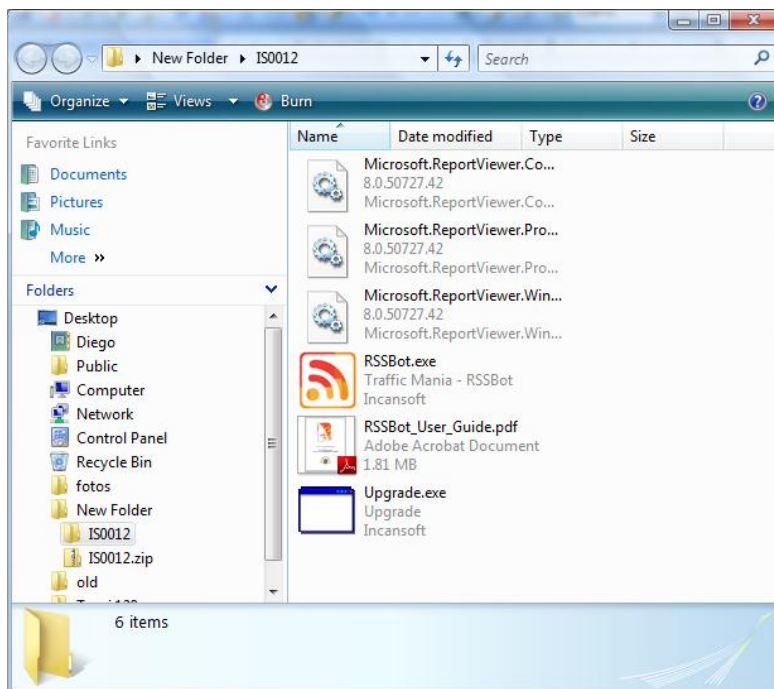

Click 'Save' and select any folder where you want to store the IS0012.zip file. After the download is completed, open the folder where you download the file in my case the folder name is 'New Folder'

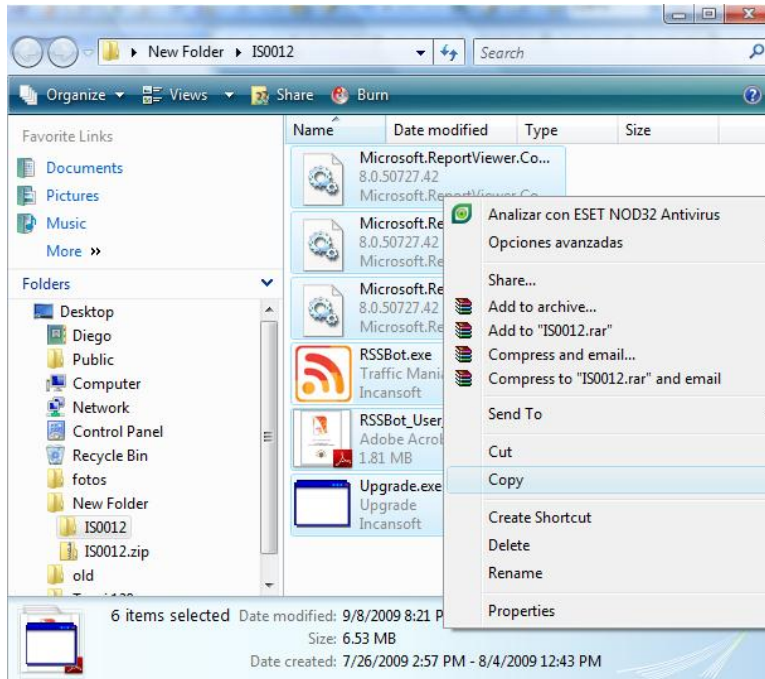

Right click over the zip file and extract all the content, I'm using windows vista default tool for this

Once the extraction is completed open the folder where all the extracted files are

Select all the files, right click, and then choose 'Copy'

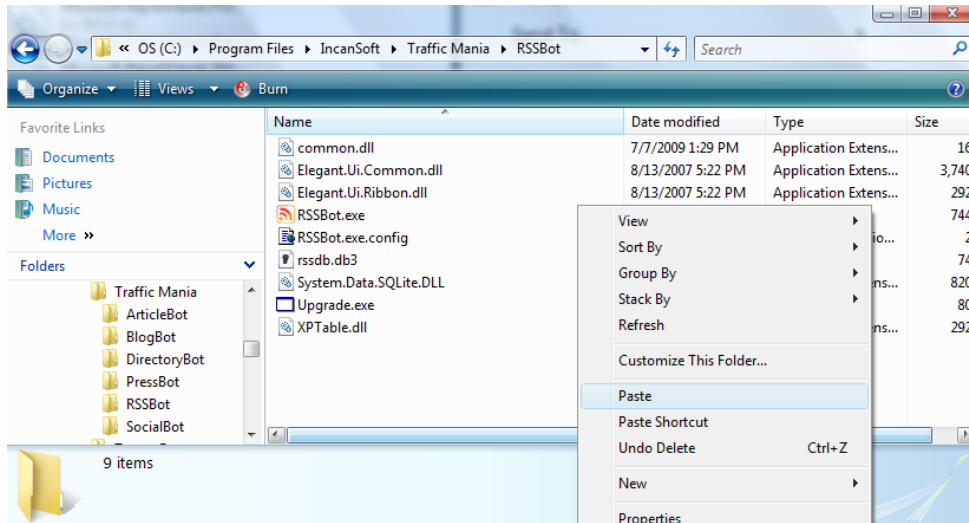

Now we have a reference of all the files in the memory, so now we need to find where the installer put all the program files when you did the installation.

If you didn't change anything at the time of the installation, the path for the folder should be:

```
C:\Program Files\Incansoft\Traffic Mania\ArticleBot (for ArticleBot)
C:\Program Files\Incansoft\Traffic Mania\DirectoryBot (for DirectoryBot)
C:\Program Files\Incansoft\Traffic Mania\SocialBot (for SocialBot)
C:\Program Files\Incansoft\Traffic Mania\PressBot (for PressBot)
C:\Program Files\Incansoft\Traffic Mania\RSSBot (for RSSBot)
```

Open your windows explorer to find the path folder of the program you are trying to upgrade, once you have found the folder just right click and choose 'Paste', Windows is going to alert you about because you are trying to replace files, choose yes to replace for all the questions.

The upgrade is completed, now close all the windows and run the program from your shortcut.
